INTRODUCTION

- **Email Command Center**
 1. The Core Problem (The "Why"):-Email Overload: Students get 50+ emails daily (Newsletters, VTU notifications, internship alerts, spam).The "Missed Opportunity" Risk: High-stakes emails (like a Google internship reply or an urgent CMRIT exam update) get buried under Zomato ads.Decision Fatigue: Spending 30 minutes just sorting mail breaks a student's "Flow State."

Electronics and communication

ABOUT Email Command Center

- ▶ **What is Email Command Center?**
- ▶ **Definition:**
An AI-powered intelligent email triage system that analyzes and prioritizes emails based on importance.
- ▶ **Purpose:**
To act as a **Digital Bodyguard** that protects users from missing critical information.
- ▶ **Goal:**
To transform **email chaos into a structured and distraction-free workflow.**

OBJECTIVE

- To analyze incoming emails using AI and NLP techniques
- To classify emails based on urgency and importance
- To reduce time spent on manual email sorting
- To prevent missing important opportunities like internships
- To reduce decision fatigue and distractions
- To maintain user flow state and improve productivity
- To create a smart and organized email system.

Electronics and communication

LITERATURE REVIEW

Research studies indicate that email overload significantly affects productivity and increases stress levels among users. Traditional email systems such as Gmail filters rely mainly on keyword-based filtering and lack contextual understanding.

Recent advancements in Natural Language Processing (NLP) enable systems to understand the meaning and intent of text data. Machine Learning models improve classification accuracy and help in intelligent decision-making.

Therefore, AI-based email prioritization systems are essential for improving workflow efficiency and managing digital communication effectively.

Electronics and communication

METHODOLOGY

The system begins by collecting incoming emails from the user's inbox. The collected data is then preprocessed to remove unnecessary information and prepare it for analysis. Next, Artificial Intelligence and Natural Language Processing techniques are applied to analyze the content and subject of the emails. Based on this analysis, the system classifies emails into different priority categories. Finally, the categorized emails are displayed to the user in an organized format, allowing quick access to important information..

Electronics and communication

BLOCK DIAGRAM

BLOCK DIAGRAM

Explanation of Block Diagram

.The system starts by collecting emails from the inbox. These emails are processed using an AI/NLP engine that understands the content of each message.

.The classification system then categorizes emails into different priority levels. These are divided into triage zones such as critical, important, and low priority.

.Finally, the categorized emails are displayed on a user dashboard, allowing users to quickly focus on important emails and take necessary actions.

SMALL CODE TO UNDERSTAND IT

```
if "internship" in email or "exam" in  
email:  
    category = "Critical"  
elif "update" in email:  
    category = "Important"  
else:  
    category = "Low Priority"
```

Electronics and communication

COMPONENTS OR CODING LANGAUGES

- ▶ **Software Components Used:**
- ▶ Email API (Gmail API)
- ▶ AI/NLP Model
- ▶ Database (Firebase / MySQL)
- ▶ Web Dashboard Interface
- ▶ **Coding Languages Used:**
- ▶ Python (for AI and NLP processing)
- ▶ JavaScript (for frontend development)
- ▶ HTML and CSS (for user interface design)
- ▶ SQL (for database management)

Electronics and communication

RESULTS

*The system successfully classifies emails into different priority levels using AI techniques. It reduces the time required for manual email sorting and ensures that important emails are not missed.

*The organized display improves user productivity and helps maintain focus. Overall, the system demonstrates effective automation and intelligent email management.

Electronics and communication

CONCLUSION

The Email Command Center provides an efficient solution to email overload by using Artificial Intelligence to understand and prioritize emails. It acts as a digital bodyguard, ensuring that critical emails are never missed while filtering out unnecessary distractions. By transforming a cluttered inbox into an organized system, it helps users maintain their flow state and improve productivity. This system represents a significant step toward smarter and more efficient digital communication management.
